

Faux Body Parts greatly increases the value of any training evolution by implementing hyper-realism into each scenario. Each item is manufactured out of a life-like material to the highest detail, ensuring training fidelity and longevity. Multiple studies have shown that stress inoculation training prevents possible long term psychological injuries. By utilizing realistic body parts in training, first responders can be introduced to the worst case scenario and be mentally and physically prepared to face any unforeseen challenge.

The Faux Body Parts are competitively priced and when properly maintained can be used indefinitely.
